1. Introduction

1.1 Features

This application program is a utility for USB flash disk to keep their security data. The users can set a hidden partition to store confidential data and use the password to switch the public area and the private area.

1.3 Supported Platform

Windows® XP/2000/ME/98 only.

Language Support: Total 11 languages support and detect automatically. Traditional Chinese, Simple Chinese, English, Japanese, Korea, German, French, Italian, Russian, Spanish and Portuguese.

1.4 Run the Program

Click on the **USBDisk.exe** icon to execute the program.

User can download the program from web site. After disk partitioning this program is copied automatically to the USB flash disk public area such that user can use the utility at other computers.

2. Operation

2.1 User Interface

The USB flash disk supports a private area that is hidden while it is plugged-in.

The users must input the correct password to enter into the private area.

The **Password** must be less than 8 characters. The **Hint** could be 32 characters.

The hint content is shown upon clicking on the **Hint** space.

Password button: Allows user to change the **Password** and **Hint**. User must key in correct password then click this button to change password.

See **2.2 Change the Password and Hint**.

Partition button: Allows user to change the space of the private area. User clicks this button to define or change the space of the private area.

See **2.3 Change the Space of the Private Area**.

OK button: Confirm password to login to the private area.

See **2.4 Login to the Private Area**.

Cancel button: Close the dialog window and exit.

2.2 Change the Password and Hint

Input the password and click the Password button to enter into change-password window.

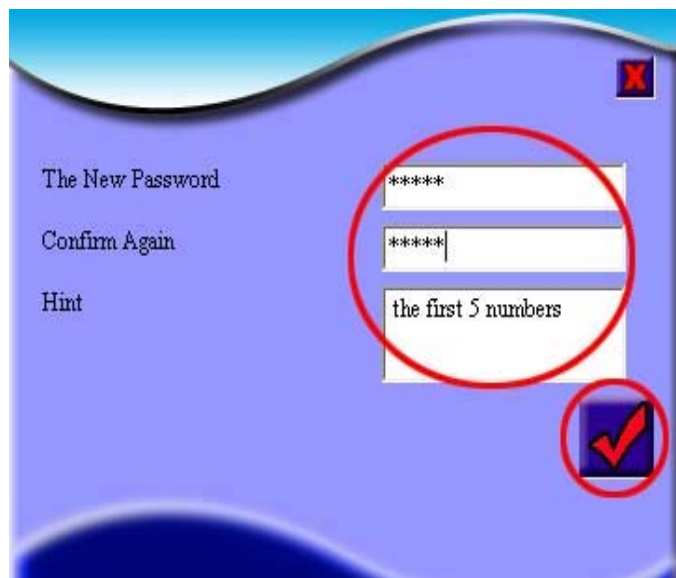

Input the new password and confirmation.

User may change the hint content in Hint space.

Click Ok button to proceed or Cancel button to abort and exit.

The **Password** must be less than 8 characters. The **Hint** could be 32 characters.

2.3 Change the Space of the Private Area

Click the Partition button to enter into partition window.

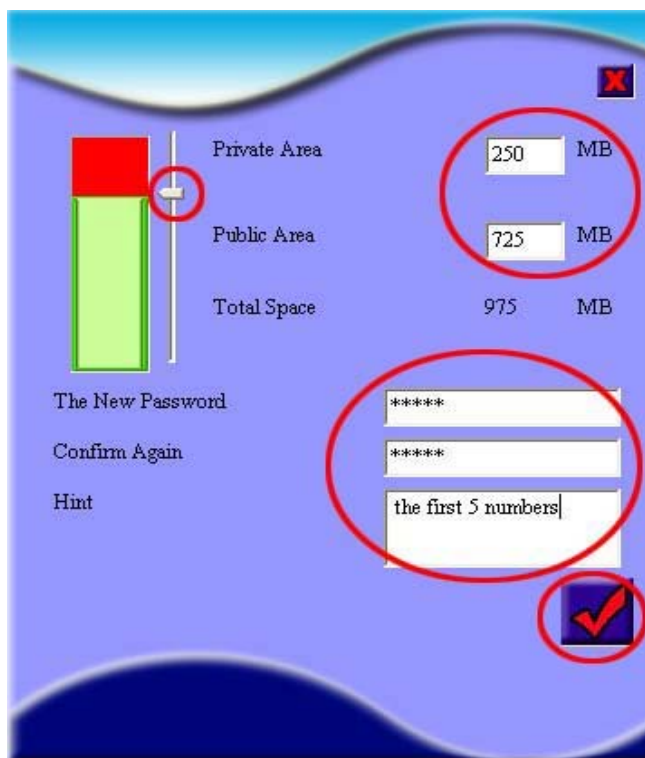

By adjusting the scroll bar or typing in the number space, user can set the sizes of private and public area.

Input a new set of password and hint for new partitioning.

Click OK button to proceed or Cancel button to abort and exit.

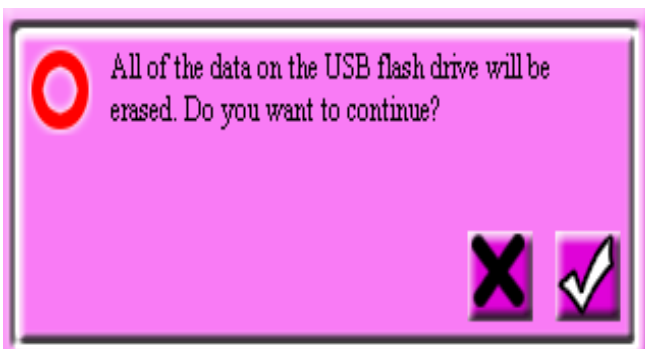

Note:

After the partitioning, the USBDisk.exe will be copied to the public area and Logout.exe will be copied to the private area.

Warning:
Change the space of the private area will erase all data. Please backup the data before running this function.

Click OK button to proceed or Cancel button to abort and exit.

2.4 Login to the Private Area

Input the password and click the OK button to enter into the private area.

Logout from Private Area

There are two ways to exit from the private area to the public area.

1. Click the **Logout** icon in the private area.
2. Un-plug and re-plug the USB flash disk. Re-plug always switch the flash disk to the public area.
